Since our product is aligned with our initial backlog

We analyzed our application's features and workflows to create 10 tests that best reflect its actual functionality.

	A	B	C	D	E	F	G	H	I
1									
2			Test case #1	StockMaster3000					
3									
4			Name	Registration of the new profile					
5			Description	User provided with app initial state and needs to create new account and successfully login in with it					
6			Preconditions	Empty application on the starting page					
7			Expected post-condition	Application "home / initial / main" page					
8			Actual post-condition						
9			Severity level						
10									
11			Design Date	24/04/2014					
12			Executed date:						
13			Execution by:						
14									
15									
16									
17									
18			Step	Expected Action	Expected System Response	Actual Action	Actual System Response	Pass / Fail	Comment
19			1)	Push Login or Inventory button	Login page open				
20			2)	Push Registration Button	Registration page open				
21			3)	Filling the fields and push registration button	Login page open				
22			4)	Filling the credentials and push login button	Application "home" page				
23			5)						
24			6)						
25			7)						
26									
27									
28									
29									
30			Test case #2	StockMaster3000					
31									
32			Name	Interface clarity					
33			Description	The user is offered a clear option to add an item of their choice to the inventory / fridge.					
34			Preconditions	Initial page (from the previous test)					
35			Expected post-condition	One product in the new inventory					
36			Actual post-condition						
37			Severity level						
38									
39			Design Date	24/04/2014					
40			Executed date:						
41			Execution by:

Those 10 test cases

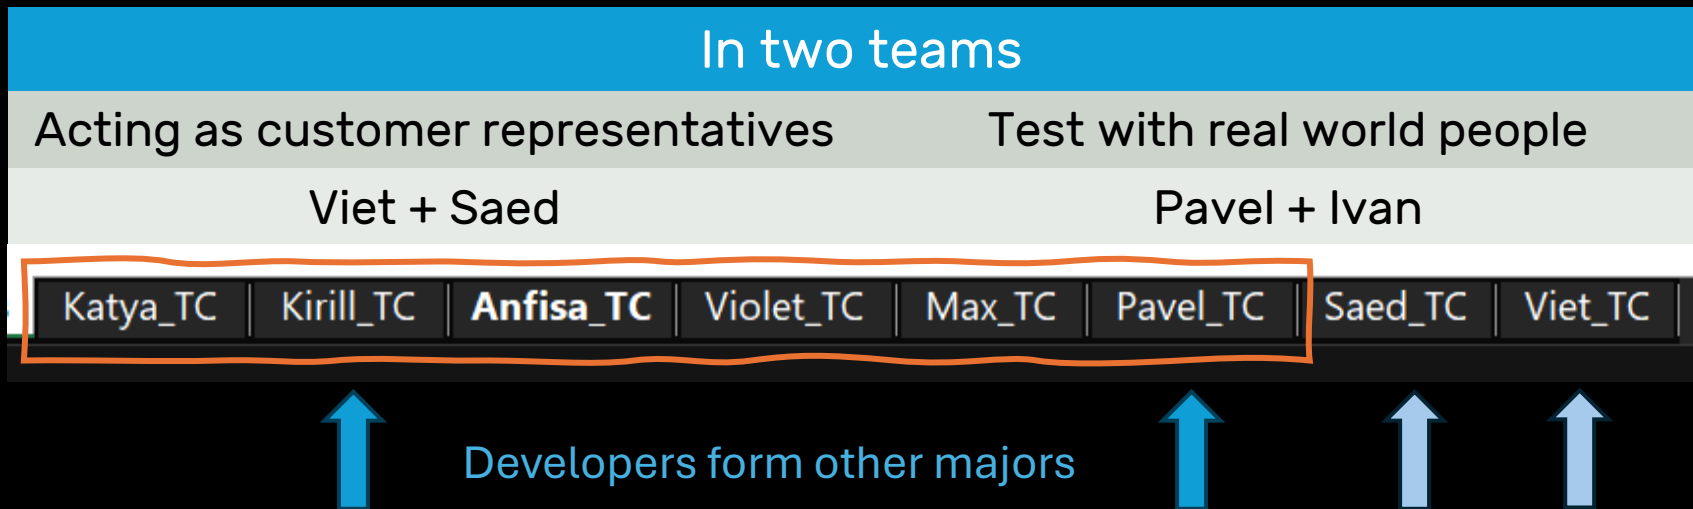

TC#	TC Name	Amount of steps
1	Registration of the new profile	4
2	Interface clarity	4
3	Products manipulation	5
4	Inventory manipulation	4
<i>Second stage of testing – requires beforehand created account</i>		
5	Localisation clarity	4
6	Analysis clarity	2
7	Generate meal suggestions	3
8	Find certain product	4
9	Old report evaluation	3
10	Exiting the application	1
<i>All in all</i>		
On average		3.4
Median		4

UAT evaluation

Was conducted within:

6 real world people and 4 as a developers

We understood the importance to test on peoples from different fields

(Software developers from different majors are indtentent to see product the same way as we are)

Priority list out of our UAT

The screenshot displays a document with several sections titled "Top 3 Issues". Each section contains a list of user interface problems, with some text highlighted in different colors (blue, green, red, orange). A red rectangular box on the right side of the document contains a prioritized list of five items:

1. Registration to login
2. Qty, Supl, Price – fields clarity
3. Previous report evaluation
4. Close and Delete inventory
5. Notification appearance and clarity

Based on our class example exercise:

- We selected the top 3 most important issues in each test.
- From these, we identified the top 5 critical items to address.
- Finally, we reordered them according to priority

Priority list out of our UAT

1. Qty, Supl, Price – fields clarity
2. Registration to login
3. Previous report evaluation
4. Notification appearance and clarity
5. Close and Delete inventory

Self heuristic tasks analysis + priority list

TC	Pavel	Saed	Viet	Ivan	Total Score	
#1 Simple & natural	3	2	0	0	5	
#2 Uses users' language	1	2	2	2	7	- Real users have trouble find certain functionality
#3 Minimize memory load	3	0	0	0	3	
#4 Consistency	4	1	0	1	6	
#5 Feedback	3	0	0	3	3	
#6 Clearly marked exits	1	3	3	2	9	- Main subWindow without exit and delete button color
#7 Shortcuts	1	1	2	1	5	
#8 Constructive error messages	0	0	0	2	2	
#9 Prevent errors	4	3	3	1	11	- Unclarity of certain fields, no doublechecks
#10 Documentation	3	4	4	3	14	

Next sprint

+ app not really self explanatory

Daily scrums and contribution hours

The screenshot shows a Zoom meeting in progress. The main window displays a presentation slide titled "Our findings out of UAT" with the subtitle "3 most important in each test + priority = top 5 things to repair". The slide lists several "Top 3 issues" with their descriptions and priorities. Below the slide, a list of participants is visible: Pavel Degterev, Saed, Viet, and Buda. The Zoom interface includes standard controls at the bottom.
