

Acceptance Test Plan – StockMaster3000

1. Introduction

This Acceptance Test Plan outlines the criteria and tests to validate the StockMaster3000 inventory management system. The goal is to ensure the system meets the specified requirements before final deployment.

2. Acceptance Criteria

ID	Requirement
AC1	Users can add, view, update, and delete products.
AC2	Products must have valid supplier, category, and inventory IDs.
AC3	Nutritional info and expiration dates must be saved and displayed correctly.
AC4	The user interface must be intuitive and easy to navigate.
AC5	The system must respond to user actions (e.g., form submissions) within 2 secs.
AC6	The system must prevent invalid data (e.g., negative quantities or empty names).
AC7	The system must store data securely in the database.

3. Acceptance Tests

Functional Tests

Test Case ID	Description	Steps	Expected Result
TC001	Add new product	Fill out product form → Submit	Product is saved and appears in product list
TC002	View product list	Go to product list page	All saved products are listed
TC003	Delete a product	Click delete on an existing product	Product is removed from the database and UI
TC004	Product must have valid supplier/category	User defines the product Category	Product saved with correct foreign keys
TC005	Prevent invalid product input	Leave name blank or enter negative quantity → Submit	Error message is shown, product is not saved

Usability Tests

Test Case ID	Description	Steps	Expected Result
TC006	UI navigation is intuitive	Try adding, viewing, deleting a product without training	User can use the system easily
TC007	Form fields are labeled clearly	View product form	Fields are understandable without confusion

Performance Tests

Test Case ID	Description	Steps	Expected Result
TC008	Form submission time	Submit product form	Response occurs in less than 4 seconds
TC009	List loading time	Open product list with many entries	Page loads in under 2 seconds

4. Test Environment

- OS: macOS (Apple M3 Pro)
- IDE: IntelliJ IDEA, Visual Studio Code
- Browser: Chrome / Safari
- DB: MariaDB
- Language: Java, Vaadin
- Tools: Git, SonarQube, Check Style, FindBugs

5. Sign-off Criteria

The product will be considered accepted if:

- All critical and high-priority test cases pass.
- There are no critical bugs or issues that prevent usage.
- The UI is usable without developer assistance.
- Stakeholders (instructor/team) approve the results.
